

NPGA Announces Affinity Endorsement of the P3 Compliance System and P3 Duty to Warn Program

For Release: NPGA, Washington, DC, February 1, 2018

The National Propane Gas Association (NPGA) announces a newly established Affinity Program from P3 Propane Safety. P3 offers a compliance documentation management system that includes Error Recognition Technology. The P3 Compliance System is a unique program that enables propane marketers to have safety inspection files that are 100% accurate and free from clerical error or incorrect field documentation.

Christine Hutcherson, Director, Member Services, NPGA, said, "The P3 Compliance System provides our members with the ability to electronically store, retrieve, and easily review important safety inspection data. Perhaps most importantly, the Error Recognition Technology means users can have safety inspection data that is 100% complete and accurate. This is good for our members and the industry at large."

In addition, the P3 Compliance System provides users with all the elements needed to implement or upgrade their propane safety documentation including inspection forms, guidance (training) documents to facilitate consistency, and ongoing review of inspection data by in-house propane safety professionals, which can be done remotely through the cloud-based system.

Eric Leskinen, Executive Vice President of P3 Propane Safety's consulting service said, "The P3 Compliance System solves two of the biggest challenges that marketers face when striving for accurate and complete safety inspection records for each customer. First, having the capacity to review thousands of field inspections is a daunting, if not impossible, task. The system's Error Recognition Technology does this automatically, making the task fast and efficient. Secondly, this process provides for significant improvements in training. We can identify errors by individual technicians and then customize training on a client-by-client basis, rather than a one-size-fits-all approach."

P3's Duty to Warn Program has also been endorsed as part of the NPGA Affinity Program. Jerry Schimmel, Vice President of P3 Propane Safety, said, "What marketers like best about our process is that it is comprehensive, cost effective, and efficient. We provide customized informative safety letters, the included PERC brochure, and a third-party certificate of completion for marketer records. As a result of our efficient turn-key process, we have developed into the number one duty to warn service vendor in the industry, mailing over one million pieces for over 300 marketers in 2017."
